

Topping-out ceremony for the new bachmaier company building in Bischofswiesen

Bischofswiesen, May 12, 2022. On Thursday, there was reason to celebrate in Pfaffenfeld II: The shell of the new company building of bachmaier GmbH has been completed. With a festive topping-out ceremony, bachmaier managing director Fabian Kubicke honored all construction workers and executing trades that have been involved in the construction so far. Soon, the new building will offer up to 99 modern workplaces with a feel-good atmosphere and space for the production of innovative hearing-related products. The new company building will be ready for occupancy from fall 2022.

Rapid construction progress

Construction work on Pfaffenfeld II in Bischofswiesen only started in July 2021. After only ten months, the shell has been completed: Over 154 precast concrete elements, each weighing up to 12 tons, and 255 square meters of wooden windows have been installed so far. Around 100 employees and guests attended the topping-out ceremony at the construction site. Owner and bachmaier managing director Fabian Kubicke thanked all those involved: "I am very pleased, we are right on schedule with the construction. A big thank you to all those involved. Such a pace is only possible through excellent planning and cooperation." The project, which is being coordinated by Katharina Irlinger, Project Manager Construction, and Matthias Schulmayr, PLAN MAS GmbH, is progressing on schedule with the interior work.

Modern architecture meets climate protection

The new company building with a facade design in exposed concrete with wooden elements harmonizes with the surrounding meadows and the impressive mountain backdrop. With the generously planned green spaces and plantings, bachmaier creates a balanced connection between the surrounding nature and the company building. The company attaches particular importance to sustainability - both in planning and in construction. In the coming weeks, a photovoltaic system will be installed on the roof and the groundwater heat pump will be put into operation. The climate-neutral energy supply of the entire building as well as the supply of the e-charging stations of the bachmaier vehicle fleet are thus secured.

Fantastic place to work

With the new building, bachmaier is laying the foundation for success in the coming years. "Well-being in the workplace, sufficient space for creative ideas and a place for togetherness are a good basis," emphasizes Katharina Irlinger. In the future, the generous glass

fronts of the wooden windows made of local larch will ensure a pleasant room climate and sufficient natural light at every workplace. With the completion of the new building, up to 99 modern workplaces will be created on a floor area of 1677 square meters. "Some vacancies, which are waiting to be filled, still exist. We are happy about every applicant who wants to shape the world of hearing with us," says Fabian Kubicke.

Hearing innovations from the Alps

bachmaier GmbH, based in Ramsau, is a developer, manufacturer and service provider for hearing-related products. With a total of 55 employees, the company has been developing and producing custom-made products for the hearing aid industry, the hearing protection industry and the music industry for over 30 years. In the meantime, bachmaier[®] maintains production facilities in Germany and Hungary and supplies professional equipment to acousticians, hearing protection manufacturers and otoplastics laboratories throughout Europe.

Planning sustainable buildings with virtual reality technology

With clever ideas, PLAN MAS GmbH from Bischofswiesen offers tailor-made solutions for construction projects of all kinds in the Berchtesgadener Land region. From the individual design to the supervision of the execution phase. Special emphasis is placed on the use of ecological materials and economical construction methods. Planning on a 3D model and the use of the latest visualization technology gives the client the opportunity to precisely influence the design of the project at any time.
